Welcome to your Disney Princess Snow Globe Maker, a complete Workstation containing everything you need to create two wonderful, magical, reusable Snow Globes. Simply create a scene, add a beautiful princess figure, fill with glitter, snow and water and you’re ready to twirl a glitter-tastic whirlwind.

What’s in the box?

i. Filler Funnel
ii. Rear Stand
iii. Workstation Base and Storage Drawer
iv. 2 x Tubes of Glitter and 2 x Tubes of Snow
v. Princess Figures (x 2 - Cinderella and Ariel)
vi. Printed Scenery Pieces (supplied in sheets with pop out pieces)
vii. Dome Base (x2)
viii. Dome Base Cover (x2)
ix. Dome Globe including Fans (x2)

So let’s begin by setting up your Workstation.

Please read through these instructions fully before starting to make your first Snow Globe. Make sure you have a clear working area. Working with glitter and water can be messy, so placing your Workstation on a wipe clean surface or on top of a table covered with newspaper is a good idea. You will also need a container of cold tap water which is required for step 13 in the making process. A jug or drinking glass containing 350ml of water will be sufficient for each Snow Globe you make.

1. Clip the Filler Funnel onto the Rear Stand. It is very important that you assemble these two pieces in the same direction as shown in the picture.
2. Push the Rear Stand into the hole at the back of the Workstation Base. Make sure that the Filler Funnel is pointing towards the front of the Workstation Base.

3. Place the four Glitter and Snow Tubes into their holder spaces in the Workstation Base.

Now you are ready to create your first Snow Globe.

4. Select the Snow Globe you wish to use. If already assembled, you will need to take it apart in order to start adding your decoration. To do this, gently rotate the Dome Base Cover anti clockwise, which will release the two Dome Base Cover locks.

5. Once released, slide the Dome Base Cover upwards and over the top of the Dome Globe. Place it to one side for later.

6. Now carefully remove the Dome Globe from its base by wiggling and gently rotating the Dome Globe. As the seal to make the Dome watertight needs to be very strong, this may be a little hard to do, so ask an adult to help if you have trouble.
Now the fun begins.

7. Take the Printed Scenery Sheets and pop out the pieces. Select the ones you wish to use (the other pieces can be kept in the storage drawer). The scenery has a protective film cover on one side, make sure that you peel this off. Start creating your scene by slotting the larger pieces between the ridges around the edge of the base and the smaller pieces into the holes in the Dome Base. Remember when creating your background scene that the side of the Dome Base with the wheel is the front.

8. Now take a beautiful princess model and slot her onto the spindle in the centre of the Dome Base.

9. Place the Dome Globe back onto the Dome Base ensuring that the small raised plastic lug above the wheel slots into the notch in the Dome front. This is very important, otherwise the Dome Base Cover can’t fit back on.

10. Slide the Dome Base Cover back over the Dome Globe (a) and twist the Dome Base Cover clockwise (b) to lock into place (c).
Now you’re ready to start filling...

11. Place your Globe onto the Workstation Base. The Disney logo and the turning wheel should be at the front of the Workstation.

12. Pull out the Dome Plug on top of the Dome Globe and lower the Filler Funnel into position so that it fits inside the hole on top of the Dome Globe.

13. Choose the glitter and snow you wish to use and pour it through the Filler Funnel into the Globe. Don’t pour too much inside to start with – you only need enough to lightly cover the Dome Base. This is about 1/3 of a tube of glitter or snow per Snow Globe and you can always add more at a later stage if you want. Shake the glitter in the Globe before adding water to make sure it is spread evenly. Now pour clean, cold tap water through the Filler Funnel into the Globe, filling right up to the top of the Fan. Stop just before the water overflows.

NOTE: If the water does not drain through the funnel into the Globe easily, lift the funnel slightly out of the hole in the top of the Dome.

14. Lift the Filler Funnel, replace the Dome Plug and you have completed your first Snow Globe ready for display.
15. Twirl the knob on top of the Snow Globe for a glitter-tastic snow whirlwind.

16. Rotate the wheel at the base of your Snow Globe to see your princess dance.

NOTE: if the glitter/snow becomes clumped together, give the Snow Globe a gentle shake, but do not turn the Snow Globe upside down as the scenery may fall out.

NOTE: if the glitter fails to fall to the bottom or sticks to the sides of the globe, add 2 x drops of ordinary washing up liquid to the water. Washing up liquid should only be used under adult supervision.

Have fun making the two Snow Globes included in this set, but remember not to leave the globes in direct sunlight or the water may turn green. If you wish to create a new scene, open the Dome Plug, pour out the contents and repeat from step 4. Be very careful when emptying the water from the Snow Globe. Always do this over the sink. If you run out of glitter you can use any shop bought glitter.
If you need any help or advice about this or any John Adams product, please contact our customer services help line directly on 01480 414361 or email customerservices@johnadams.co.uk

John Adams have a great selection of craft kits for girls of all ages, a brilliant collection of “Action Science” kits and a wide range of games. Our products are available in most good toyshops and many other outlets.
